- Surebuild light gauge steel framing and structural walls
- Modular Building Components
- Laser Cutting, Punching and Notching
- Pre-Galvanised profiles up to 6mm thickness and 500mm in depth
- Grain and Bulk Storage Panels
- Bespoke Sections manufactured to clients individual requirements
- Extensive dedicated Fabrications and Paint shop Facilities

Building Wizard Software V1.8.3.4

Our new design software is now available. The software package facilitates cost effective design of Purlins, Side Rails, and Mezzanine Floor Beams all in accordance with current Eurocode standards. An integral database allows for a quick and accurate assessment of loadings including wind load and snow load for all locations in the United Kingdom and Ireland. This all in one application enables production of detailed reports for submission to any checking authority.

See our website or contact our sales team to request the software.

Latest News

As part of a continuing investment programme, BW are pleased to announce the installation of a new flexible roll forming line for the production of 'C' (lipped channels) and 'U' (plain channels) Sections. The impressive range of profiles adds to our comprehensive and existing range. This machine will produce sections from 100mm wide x 2mm thick to a massive **500mm wide x 6mm thick** and any size in between. It also boasts flying cut and punching units, and will produce sections to very tight tolerances to a maximum length of 18 metres. The sales office would be pleased to take any enquiries, or arrange a visit from our technical sales representatives.

Going Green!

This January, BW Industries Ltd has successfully achieved accreditation via a third party namely SGS UK, to the Environmental Standard BS EN 14001:2004.

Achievement of this accreditation was one of the company's objectives of continuous improvement, and will compliment the BS EN 9001:2008 quality system that has been in place since June 1999.

We would like to thank all the staff at BW Industries Ltd, along with our Subcontractors and our Suppliers, all of whom have worked with us to make this possible.

About SureBUILD technology

The material is steel, the technology is Surebuild. Lightweight, load bearing framework for all applications – industrial, commercial, modular and domestic. The Surebuild name reflects the ongoing product development, independent testing and analysis, manufacturing speed and accuracy, and overall cost effectiveness.

Surebuild – solutions in steel

BW Scores at Elland Road!

BW Industries Steel Components were used for a new extension to the East Stand at Leeds United Football Club.

This summer has seen the construction of 24 new executive boxes at Elland Road, along with additional restaurants and a LUFC Museum. Each box can accommodate up to 12 guests, with seating on the balcony area where guests can watch the match. This had added just less than 1500 to the clubs corporate hospitality guest capacity.

Our versatile framing system was used to create infill panels. A 150mm system using both 1.5mm and 3mm gauged sections were applied to this design with each panel acting as a carrier for both the internal make-up and the external cladding.

Stud and Track Systems comprise of pre-galvanised components and offer much better tolerances than more traditional methods of construction.

We also supplied the design and manufacture of all lateral restraint bracket profiles for this project, allowing for a complete SFS package.

BW operates a Quality Assurance System which is accredited to BS EN ISO 9001-2008, covering all aspects of our operations.

We pride ourselves on an excellent personal service backed up by commitment to quality, and ensuring the highest levels of customer satisfaction are maintained throughout.
